about

I'm a full-stack systems researcher. This places me in a unique position to see synergies that can only be seen by understanding the entire system. For instance, I recognized that building inexpensive hardware can simplify a distributed system. I observed that programming language and architectural techniques can safely cut opaque operating system interfaces. Leveraging these insights, I prototype and build these systems with my colleagues — and most importantly, document research in a way that makes it accessible to all of computer science.

My most recent work looks at blockchains, which I view as the intersection of computer science and finance, and clocks, which still have much untapped potential in computer systems.

I work on a solo home remodel in my free time, tinker with home automation (contributions to home-assistant and Frigate Object Detection), and travel hack flights around the world.

experience

2020–Now	Senior Research Scientist I lead the clocks project, which aims to democratize precision time and leverage it as a distributed primitive. I also serve as a technical advisor to the VMware blockchain product, especially in scaling the VMware Ethereum stack.	VMware Research
2017–2020	Research Scientist I published award-winning papers on a broad range of topics including bridging the semantic gaps between kernel and userspace, interfaces for programmable hardware, RDMA and security.	VMware Research
2015–2017	Postdoctoral Researcher I led the tech transfer of CorfuDB, a high throughput, strongly consistent research database as open-source software with over 50 contributors into NSX, VMware's market leading multi-billion dollar SDN product. CorfuDB now serves as the distributed control plane of NSX.	VMware Research
Winter 2015	Research Intern I led the rebuild of CORFU, a research project I worked on at Microsoft Research, from scratch in Java as CorfuDB, adding object support, in-memory time-travel and new transaction resolution mechanisms.	VMware Research
2011–2013	Consultant Researcher I implemented and evaluated ZooKeeper over CORFU, one of the first scale-out applications running on top of the CORFU distributed log.	Microsoft Research
Summer 2011	Research Intern I built a hardware prototype of a CORFU Flash Unit using the BEE3 FPGA Platform.	Microsoft Research
2010–2017	Graduate Researcher At the Non-Volatile Systems Laboratory (NVSL), I led work on reliably erasing flash memory and reported findings to the military and other government organizations.	University of California, San Diego
2008–2009	Undergraduate Researcher At the Cognitive Ant eater Robotics Laboratory (CARL), I worked on an optimized version of the Izhikevich spiking neuron model on the IBM CELL.	University of California, Irvine
2006–Now	Independent Contractor I build hardware and software for startups under tight deadlines. My code runs in consumer products all over the world.	Wei Enterprises

education

2010–2017	Ph.D., Computer Science Advisor Steven Swanson Thesis CORFU: A Platform for Scalable Consistency	University of California, San Diego
2010–2015	C. Phil, Computer Science	University of California, San Diego
2010–2012	M.S., Computer Science	University of California, San Diego
2004–2009	B.S., Computer Science	University of California, Irvine
2004–2009	B.S., Biological Sciences	University of California, Irvine
2004–2009	B.A., Philosophy	University of California, Irvine

awards

2020	Best Paper Award Don't shoot down TLB shutdowns!	Eurosys 2020
2019	Best Paper Award Storm: A Fast Transactional Dataplane for Remote Data Structures	Systor 2019
2017	Best Paper Award The Design and Implementation of Hyperupcalls	USENIX ATC 2018
2016	Best Paper Award Replex: A Scalable, Highly Available Multi-Index Store	USENIX ATC 2016
2014	Best WACI Talk Dirty RAM and Rotten Caches: Saving the World From Useless Updates	ASPLOS 2014
2012	Google Security Hall of Fame Google Voice Authentication Flaw	Google
2012	Graduate Research Fellowship Program (GRFP) Fellow Award Recipient	NSF
2011	Graduate Research Fellowship Program (GRFP) Honorable Mention	NSF
